# SUBJECT INDEX

*Boldface numbers indicate the page where the item is defined or introduced.*

- Accuracy, maximally achievable, of regulators and tracking systems, 306–310
- Adjoint matrix differential equation, 440
- Airplane, asymptotic regulation of the longitudinal motions of an, 310–312
  - nonzero set point pitch control of an, 302–303
  - pitch control of an, 291–293
  - regulation of the longitudinal motions of an, 293–297
- Aliasing, 458
- Amplidyne, description of an, 114–115
  - nonzero set point regulator for an, 321
  - proportional feedback control of an, 116
  - regulation of an, 320
- Angular velocity control system, an
  - observer for the, 374–375
  - digital version of the, 521–522
  - integral control of the, 439–440
  - as an output feedback regulator problem, 438–439
  - as an output feedback stochastic tracking problem, 439
  - proportional feedback of the, 189–190
  - as a regulator problem, 205–206
  - solution of, the regulator problem for the, 212–216
    - the Riccati equation for the, 220
    - the stochastic tracking problem for the, 266–269
  - steady-state solution of the regulator problem for the, 222–223
  - as a stochastic tracking problem, 258–259
  - reconsidered, 321
- Autonomous system, 24
- Bandwidth, normalized, of a discrete-time control system, 481
  - of a control system, 145
  - normalized, of a discrete-time stochastic process, 481
  - of a stochastic process, 147
- Bode, 181
- Bode plot, 38
- Break frequency, of a control system, 146
  - of a stochastic process, 147
- Brownian motion, 90, 100
- Butterworth, pole configuration, 285
  - polynomial, 299
  - transfer function, 299
- Cayley-Hamilton theorem, 84
- Characteristic polynomial, closed-loop, 46, 274
  - open-loop, 274
- Complexity of output feedback control systems, 437
- Computer control, 442
- Computer program package for linear optimal control, 437–438
- Constant disturbances, effect of, in control systems, 171–172, 191–192
  - elimination of, in discrete-time regulators, 506–507
  - in discrete-time output feedback control systems, 544
  - in regulators, 277–280
  - in output feedback control systems, 414–417
- Continuous-to-discrete-time converter, 444

- Control instant, 522
- Control variable, *see* Input variable
- Controlled variable, 122, 128, 476  
shifted, 270
- Control law, asymptotically stable, 194  
asymptotic properties of, discrete-time  
optimal, 509–516  
optimal, 281–312  
discrete-time nonzero set point optimal,  
505, 543  
discrete-time steady-state optimal, 497  
discrete-time zero-steady-state-error  
optimal, 507, 544  
interconnected with observer, 378–382  
discrete-time case, 536–537  
linear, 194  
nonzero set point optimal, 273, 411  
stability of, discrete-time steady-state  
optimal, 497  
steady-state optimal, 221, 233  
time-invariant steady-state optimal, 238  
steady-state optimal, 221, 232  
time-invariant steady-state optimal, 238,  
243  
zero-steady-state-error optimal, 416
- Controllability, 53–65  
complete, 54  
of discrete-time linear systems, 459–462  
of the pair  $(A, B)$ , 56  
of time-invariant linear systems, 55–57  
of time-varying linear systems, 64–65  
uniform complete, 65  
of discrete-time systems, 460–461
- Controllability, canonical form, 60  
of discrete-time systems, 461–462  
matrix, 55  
of discrete-time systems, 460
- Controller, 119, 122  
closed-loop, 123, 128–132, 476  
open-loop, 122, 128, 476
- Control problems, multivariable, 124  
terminal, 127
- Control system, 123, 131
- Control systems, analysis of linear, 119–192  
discrete-time, 475–488  
stability of, 136–137, 184, 188, 477  
stabilization of, 137  
by open loop controllers, 184, 188
- Covariance matrix, *see* Stochastic processes
- Cutoff frequency, normalized, of a discrete-time control system, 481  
of a discrete-time stochastic process, 481  
of a control system, 145  
of a stochastic process, 147  
of the  $i$ -th link, 156
- Deadbeat observers, 527
- Deadbeat response, output, 489, 513, 515  
state, 489, 537
- Decoupling, 157  
static, 157
- Degrees of freedom of a control system, 272,  
279, 308, 415–416
- Design objective, basic, 131, 471
- Detectability, 76–78, 77  
of discrete-time systems, 465  
of the pair  $(A, C)$ , 77
- Difference function, 157, 163, 164
- Differential system, 2
- Digital computation aspects of linear optimal  
control, 436–438
- Digital positioning system, a deadbeat  
observer for the, 527–528  
description of the, 447–449  
frequency response of the, 458–459  
integral control of the, 545–546  
a nonzero set point regulator for the, 507–  
509  
observed variable of the, 524  
optimal state feedback of the, 494–495  
output deadbeat control of the, 516–517  
output feedback state deadbeat control  
of the, 537–538  
with proportional feedback, 483–487  
stability of the, 455  
with proportional feedback, 477–478  
state feedback deadbeat control of the, 490
- Dimension of a linear system, 2
- Direct link, 2  
in discrete-time systems, 447, 524
- Direct sum, 19
- Discrete-time equivalent of a continuous-time system, 445
- Discrete-time systems, inherently, 442  
linear optimal control theory for, 442–  
552
- Discrete-to-continuous-time converter, 444
- Disturbances, constant, effect of, in control  
systems, 167–174, 184–186, 188  
in discrete-time control systems, 487–  
488  
equivalent, at the controlled variable, 170  
*see* Constant disturbances

- Disturbance variable, 121, 128, 476
- Duality, of discrete-time systems, 465–466  
of discrete-time optimal observer and regulator problems, 533–534

    - discrete-time case, 548–549
  - optimal linear, with incomplete and noisy measurements, 402–405, 403
- Tracking properties, steady-state, of open-loop control systems, 184, 188
  - steady-state analysis of, 140–165
    - discrete-time case, 478–482
    - multiinput multioutput case, 155–158
    - single-input single-output case, 144–150
  - transient analysis of, 165–166
    - discrete-time case, 482–483
  - transient, of open-loop control systems, 184, 188
- Transfer function, 35
- Transfer matrix, 35
  - closed-loop, of a time-invariant regulator, 272
- Transform analysis, 33–53
  - of discrete-time systems, 455–458
- Transient analysis of control systems, *see* Tracking properties
- Transient period, 141
- Transition matrix, 11
  - discrete-time case, 452
    - of a time-invariant system, 13–14
- Transmission, 142
  - of a discrete-time control system, 479
    - first-order, 146
    - second-order, 146
- White noise, 97, 97–100
  - discrete-time, 470
  - Gaussian, 100
  - Gaussian discrete-time, 470
  - integration rules for, 98
  - intensity of, 97
  - linear differential system driven by, 97–113
  - linear discrete-time systems driven by, 470–472
- Wiener, 361
- Wiener process, 90
- Wiener-Lévy process, 90
- Zero, a system with a right-half plane, 304–306, 312
- Zeros, cancellation of open-loop, 289, 309
  - effect on sensitivity of, right-half plane, 316–317
    - output feedback control systems of right-half plane, 424
  - open-loop, 51
  - outside the unit circle, 515
  - right-half plane, 300, 308–309
  - of systems, 39–42, 41
    - discrete-time case, 457
  - of transfer functions, 39
  - of transfer matrices, 39–42
- Zero-order hold, 444
- z-transform, 455–456
- z-transfer matrix, 456
