Research Interest Cosmology in general.

My main research topic is the study of the Large Scale Structures (LSS) of the Universe and the structure formation processes in order to answer the fundamental questions in cosmology such as the cause of the accelerated expansion of the Universe (Dark Energy), the physics of the unseen skeleton of the structures in the Universe (Dark Matter) and the scenario that will describe how all this begins (The Physics of the Early Universe).

The above fundamental questions can be studied via smaller and more detailed questions such as:

- A: LSS and the Accelerated expansion of the Universe
- B: Dark Matter (DM) Substructures
- C: The primordial Universe and LSS
- D: Relativistic Cosmology and secondary anisotropies of CMB
(CMB Lensing, Polarization, SZ effect and ...)
- E: Non Linear Structure Formation
(Excursion Set Theory, DM tracers and bias, statistics of cosmic web)
- F: 21cm Cosmology
- G: Cosmology of Gravitational wave

H: Cosmology of non-Local Gravity
